Miguel Ferreiro García

AI Governance Specialist · AI & Data Products

Email: ferreirogarciamiguel@gmail.com | Santiago de Compostela, Spain · Remote
Web: miguelferre.github.io | LinkedIn: linkedin.com/in/miguel-ferreiro-garcia | GitHub: github.com/miguelferre

SUMMARY

AI governance and model-validation specialist, grounded in data analysis and product ownership. Works at the boundary between a model and the people who use it: regulatory alignment, validation, risk management and human oversight. Translates across technical, legal and business profiles, and builds data and AI products end to end. Focus on impact sectors: climate, sustainability, public health, Earth observation.

EXPERIENCE

AI Governance Specialist

GMV · Remote from Santiago de Compostela, Spain · 2026 - Present

- AI governance and integration: design of clinical validation scenarios (double-blind, ground truth, bias detection) and end-to-end model lifecycle with IBM watsonx.governance (OpenScale, OpenPages, AI Factsheets) across 2 regional health systems (Madrid and Comunitat Valenciana).
- Madrid (HealthData@MAD-R&I · FIIBAP): inventories and approval workflows for 3 use cases across pilot and production; quality, fairness, drift and explainability metrics.
- Comunitat Valenciana (Conselleria de Sanitat): end-to-end use case on a medical imaging model, designed as a reference for upcoming public procurements.
- Technical presales with IBM: AI governance demonstrations to health systems and implementation planning. Speaker for the governance demo (watsonx.governance) at an IBM event (May 2026).

Product Owner

GMV · Madrid, Spain · 2022 - 2025

- Product design and product ownership: complete data flow architecture for the European platform ProReg (European Association of Urology), iterating with urologists across multiple countries. OMOP common data model on the back-end for multi-centre reuse. Platform in active use with a second phase contracted.
- Analytical automation: ETL pipelines and automated quality gates for continuous validation of clinical data, with traceability.
- Crisis management: rescued a stalled European project 2 months from delivery; identified the root cause as a shared-definition problem, not a technical one, mediated between teams and redesigned the process into verifiable milestones. Recovery of ~60% of the project budget and on-time delivery.

Health Data Analyst

GMV · Madrid, Spain · 2021 - 2022

- Data analysis and quality assessment on European clinical datasets, laying the foundation for the OMOP architecture later deployed in ProReg.
- Collaboration with clinical stakeholders to translate domain requirements into reproducible data pipelines.

PERSONAL PROJECTS

Vigía · AI model monitoring in production · 2026

URL: https://miguelferre.github.io/en/ · v1.0.0

- Local, no-code Windows tool that measures quality, fairness across groups, drift and explainability of a model on tabular data, for binary, multiclass and regression tasks.
- Adds the human layer: deskilling, overrides and an audit of the human-AI interaction. An AI assistant runs it over MCP with 39 tools, and every action goes into an auditable log.

AI Safety and Governance course (in Spanish) · 2026

URL: https://miguelferre.github.io/en/

- Spanish adaptation of the AI safety book and course by the Center for AI Safety (CAIS), with their permission: 13 modules, 57 lessons with theory, practice and a quiz, and 75 interactive simulators (about 40 hours).
- Adds healthcare cases and a model-monitoring module that uses Vigía as the lab.

Climatch · global climate comparator · 2026

URL: https://climatch.app

- Web product in production that compares locations by climate and habitability using scientific data (ERA5 1940-2025, CMIP6): percentiles instead of averages, and 2050 projections with an explicit uncertainty band.

Praia ou montaña · beach or hike today in Galicia · 2026

URL: https://github.com/miguelferre/praia-ou-montana

- Bilingual PWA (ES/GL) that recommends beach or trail for today from real weather, sea state, tides and terrain-aware sunset: 954 beaches, 201 routes, real driving times. Explainable weighted scoring with user-adjustable weights; 25 Vitest tests, CI on GitHub Actions.

Galicia 2025 Wildfire Storymap · 2025

URL: https://github.com/miguelferre/STORYMAP_INCENDIOS_GALICIA_2025

- Full pipeline built alone, from open-data ingestion to a bilingual web frontend; 21 idempotent Python pipelines and Playwright tests (desktop and mobile render).
- Post-fire footprint via dNBR over Sentinel-2 through Microsoft Planetary Computer, retaining control over the temporal window and reclassification thresholds.

Madrid Healthy Living Index · 2024

URL: https://miguelferre.github.io/Madrid_HLI/

- Composite neighbourhood-level healthy-living index built from scratch: 18 chained R scripts and walkability isochrones with dodgr (605K vertices), published as a shinylive dashboard.
- Finding: negative correlation between healthy living and income (Pearson r = -0.26); only 9% of neighbourhoods meet the 3-30-300 urban-tree rule.

EDUCATION

MSc Bioinformatics & Biostatistics · Universitat Oberta de Catalunya · 2023

MSc Bioengineering · IQS Barcelona · 2020

BSc Biology · Universidade de Santiago de Compostela · 2018

CERTIFICATIONS

ISO/IEC 42001:2023 - AI Management System · BSI Training Academy · 2025

GIS Programming for Environmental Research · ISGlobal Barcelona · 2025

PMI Agile Certified Practitioner (PMI-ACP) · Project Management Institute · 2024

Data Management Fundamentals · DAMA International · 2023

SKILLS

AI governance: AI Governance, Responsible AI, Model Validation, Human Oversight, Human-in-the-Loop, AI Risk Management, LLM-as-judge, Bias & Drift Detection, Explainability, MLOps

Product: Product Ownership, Product Discovery, Problem Framing, Prototyping & PoC, Roadmap, User Research, Stakeholder Management, Agile/Scrum, Crisis Management

Data & stack: Data Analysis, Python (pandas, scikit-learn, geopandas, rasterio, xarray), R (terra, sf, dodgr), SQL, QGIS, Mapbox GL JS, Sentinel-2, ERA5, CMIP6, IBM watsonx.governance, Git

Frameworks: EU AI Act, ISO/IEC 42001, NIST AI RMF, GDPR, OMOP CDM, HAX-18, PAIR

Languages: Spanish (Native), Galician (Native), English (Professional), Portuguese (Working)
